SUMMARY

Full-stack developer (BSc. CSIT, Tribhuvan University, graduating 2026) specializing in React/TypeScript on the frontend and Python/Django REST Framework on the backend, with working knowledge of the Node.js/JavaScript ecosystem. Comfortable specifying features, working from design files to build test pages quickly, and owning problems independently.

EXPERIENCE

Software Developer Intern — Cloco Nepal Inc.

Jun 2026 – Aug 2026

Lalitpur District, Nepal · On-site · Software Development Fellowship

- Completed a 2-month software development fellowship, building full-stack features with React.js, TypeScript, Django REST Framework, and PostgreSQL

Frontend Developer Intern — Chanakya Software

Mar 2026 – Jun 2026

- Completed a 3-month frontend development internship, building UI features with React and modern frontend tooling
- Learned Git version-control workflows and TanStack Router/Query while working on Pokémon Versus, a React app for comparing Pokémon stats via the PokéAPI

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React, TypeScript, HTML/CSS, TanStack Router/Query, Tailwind CSS, shadcn/ui, Vite

Backend / APIs: Django REST Framework, REST API design, JWT Authentication, Node.js, Flask

Databases: PostgreSQL, MySQL, SQLite, SQL/NoSQL fundamentals

Computer Vision / OCR: YOLOv8, PaddleOCR, OpenCV-based image processing

Practices: Feature specification & documentation, Git/GitHub workflows, independent project ownership, debugging across the frontend/backend boundary

PROJECTS

BillDiv — Full-Stack Expense Splitting App

Live: <https://billdiv.netlify.app> | **GitHub:** <https://github.com/D1AZ0W/Fellowship/tree/main/capstone>

React, TypeScript, TanStack, Django REST Framework, PostgreSQL

- Designed and built a full-stack expense-splitting application enabling users to create groups, log shared expenses, and settle balances
- Implemented a Min Heap-based transaction-simplification algorithm to minimize the number of settlement transactions between group members
- Built REST APIs with Django REST Framework and JWT authentication; modeled data and managed migrations against PostgreSQL
- Configured CORS, CSRF, and Django production security settings (HTTPS, secure cookies, HSTS) ahead of deployment
- Deployed the frontend to Netlify (billdiv.netlify.app) and debugged frontend/backend integration issues

Helmet Detection & Fine Management System — Final-Year Project

GitHub: <https://github.com/D1AZ0W/FinalYearProject>

Python, YOLOv8, PaddleOCR, Flask, Computer Vision, OCR

- A final-year computer vision project designed to automate helmet-violation detection and vehicle identification
- Used YOLOv8 for detecting helmet violations from traffic images/video
- Integrated PaddleOCR to extract vehicle license plate information
- Built a Flask backend to connect the detection/OCR pipeline with violation and fine-management functionality
- Combined object detection, OCR, image processing, and backend development into a single application
- Core Pipeline: Traffic Image/Video → YOLOv8 → Helmet Violation → License Plate → PaddleOCR → Fine Management

Yatra — Multi-Role Bus Transit App (Hackathon)

GitHub: <https://github.com/D1AZ0W/yatra-Hackathon>

React Native, Expo, TypeScript, Expo Router

- Designed and built a multi-role transit app (Passenger, Driver, Admin dashboards) under competitive hackathon time constraints
- Implemented simulated live bus tracking, QR-based ride check-in, and a digital wallet supporting cash and digital payments

OnlineCom — E-commerce Web Application

GitHub: <https://github.com/D1AZ0W/Fellowship/tree/main/task9>

React, TypeScript, TanStack Router/Query, shadcn/ui

- Built a modern e-commerce frontend integrating the Fake Store API, with client-side routing, debounced search, product filtering, and reusable components
- Implemented shopping cart state and optimistic UI updates while practicing asynchronous data management and responsive user interactions

Pokémon Versus — Stats Comparison Tool

Live: <https://pokemon-versus.netlify.app/> | **GitHub:** <https://github.com/D1AZ0W/pokemon-versus>

React, JavaScript, REST API

- Built an interactive React app (component-based, hooks-driven) to compare Pokémon stats side-by-side, fetching data dynamically from the PokéAPI

EDUCATION

BSc. CSIT (Computer Science and Information Technology)

Expected Graduation: 2026

Tribhuvan University (TU), Nepal — Final semester

CERTIFICATIONS

- Software Development Fellowship — Cloco Nepal Inc. — Certificate of Completion
- Hackathon Participation Certificate — Yatra Bus Transit App (2026)
